# Cvent UI Candidate Tech Challenge

Create the following weather widget:

Project Description

A client has requested that we create a custom weather widget that should display the current temperature, weather conditions and five day forecast for McLean, VA.

- HTML will be evaluated for structure and tag selection.
- CSS will be evaluated for cross browser compatibility. Assume modern browsers with CSS3 support. IE9+, Firefox and Chrome.
- JS – use whichever js library you feel most comfortable using.
- Post your completed project to github, jsfiddle or codepen.
- Submit the final link within 3 days.

Copy and paste the following link to make your API call:
http://query.yahooapis.com/v1/public/yql?q=select%20item%20from%20weather.forecast%20where%20location%3D%2222102%22&format=json

Widget Specification

- No hard coded content. All content should be served dynamically from API.
- Dimensions of the widget are 310px x 160px.
- Widget should be horizontally and vertically centered in window.
- Consider that the widget will be reused on external websites where you have no control over existing CSS and/or JavaScript present on the page.
